Data Management Journey

The path to successful Data Management with D-QUANTUM

We centralise business data know-how on a single platform and combine it with automatically generated metadata. This is the basis to **understand your data and unlock data insights.**

You can choose between **pre-defined solutions** or an **individual consulting approach.** We have summarised the **most important solutions** for you on the Data Management Journey.

We take you along on the journey!

Business Glossary
Business key figures & definitions in lineage representations and business object structures.

Data Catalog
Automatically generated map of your IT systems.

Integrated Metadata Management
Combination of business and technical metadata.

Data Contracting
Automated creation and updating of data supply agreements, etc.

Data Quality Management
Data quality indicators, processes for data quality improvement and reporting of the data quality.

Data Request Management
Identify data, order data and use data.
